*To whom it may concern*

**Subject: LEED Credit for powder coatings**

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System™ encourages and accelerates global adoption of sustainable green building and development practices through the creation and implementation of universally understood and accepted tools and performance criteria.

LEED is a third-party certification program and an internationally accepted benchmark for the design, construction and operation of high performance green buildings. LEED promotes a whole-building approach to sustainability by recognizing performance in five key areas of human and environmental health:

- sustainable site development
- water efficiency
- energy efficiency
- materials selection
- indoor environmental quality

Powder coatings are part of Indoor Environmental Quality, Credit 4.2 - Low emitting materials: Paints and coatings.

Powder Coatings are a safe and environmental friendly alternative to any other types of industrial coatings. We hereby certify that Protech / Oxyplast powder coatings applied on office and commercial furniture as well as structural and architectural building components will contribute to LEED credits. Our powder coatings emit zero VOC once fully cured and only trace amounts while being cure in the oven.

If you need any other information, please do not hesitate to contact me.

Yours truly,

Cristina Roman
